DETAILED ACTION

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the offset between the outer and inner polygons in claim 36 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

Art Unit: 3711

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 36 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The term "offset" is vague and indefinite. One of ordinary skill in the art would not be able to determine the metes and bounds of the invention.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3711

Claims 28-31 33-38 and 40 are rejected under 35 U.S.C. 102(e) as being anticipated by Tucker (6500079). Tucker discloses a one, piece hollow tube having a first end and a second end with said first end attached to a lacrosse head; said first end and said second end defining a length of said hollow tube; said hollow tube having an interior surface and an exterior surface; said exterior surface defining a substantially fixed perimeter along said length; said hollow tube divisible into a first half on one side of a centerline of the handle and a second half on the other side of the centerline of the handle; said hollow tube having a first wall thickness in said first half and a second wall thickness in said second half; said first wall thickness diametrically opposed to said second wall thickness and greater than said second wall thickness (fig 6b). Note: item 502 is an insert. The existing claim language would read broadly on the handle as shown. The thickness of the tube section adjacent area 507 is less than the thickness directly across from it.

As to claims 29 ,33 37 and 40: Tucker discloses an aluminum material (10:59-65).

As to claims 30-31 and 38 : Tucker discloses a substantially constant wall thickness (fig 6b).

As to claims 34-36 : See claim 28 rejection.

Claims 32 and 39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tucker as applied above and further in view of Official Notice . Official Notice is taken that the use of extrusion is well known in the art. It would have been obvious to one of ordinary skill in the art at the time of the invention to have employed an extrusion means for making the handle based on cost and design considerations.
